Objective

A dedicated Machine Learning Engineer with a passion for uncovering insights from complex datasets. Seeking opportunities to apply analytical and machine learning skills to solve real-world problems in the tech industry. Proficient in data analysis, statistical modeling, and machine learning with strong Python programming skills. Proven track record of delivering data-driven insights and predictive models. Committed to staying updated with the latest advancements in data science.

Technical Skills

- Data Analysis, Machine Learning, Python, SQL
- Data Visualization (Matplotlib, Seaborn)
- Data Cleaning and Preprocessing, Predictive Modeling
- Statistical Analysis, Data Mining, Text Preprocessing
- Deep Learning (TensorFlow, Keras)
- Natural Language Processing (NLP)

Education

Bachelor of Science in Computer Science
Federal University Oye-Ekiti, Oye-Ekiti, Nigeria
January 2019 - August 2024

West African Examination Council
Federal Government College, Ikole-Ekiti, Ikole-Ekiti, Nigeria
September 2013 - July 2019

Certifications

- LearnTube Certified Machine Learning Core Elementals
- Forage BCG X Data Science Job Simulation
- SkillUp by SimpliLearn PostgreSQL
- Google Coursera Crash Course on Python
- GDSC & I4G Data Science Bootcamp
- Jobberman Soft-Skills Training

ALONGE OLAMIDE SAMSON +234 903 505 5838 | alongeola16@gmail.com

Projects

- **King County, USA House Price Prediction**
  Developed a predictive model using machine learning to estimate house prices based on historical data, improving real estate decision-making.

- **Customer Churn Prediction**
  Built a classification model to predict customer churn, enhancing retention strategies with actionable insights.

- **News Credibility Detection**
  Created an NLP-based model to assess news article credibility, combating misinformation with Naive Bayes techniques.

- **Text-Based Emotion Detection**
  Designed a Random Forest classifier to analyze textual data and detect emotions, aiding customer feedback analysis.

- **Pneumonia Detection from Chest X-ray**
  Implemented a machine learning model to detect pneumonia from X-ray images, supporting rapid healthcare diagnosis.

- **Malaria Detection from Cell Images**
  Developed an MLP neural network using a Radial Basis Function Network to detect malaria, aiding medical diagnostics.

- **Twitter Data Sentiment Analysis**
  Conducted sentiment analysis on Twitter data using NLP techniques, providing insights for social media monitoring.

- **IGA Hifadhi Counseling Recommender**
  Led development of an ML-powered system offering personalized subject recommendations for Rwandan students based on performance and interests.

- **Kinyarwanda Hate Speech Detection**
  Built a Flask-based platform using Davlan Afro XLMR Mini to classify Kinyarwanda text, with moderation tools and a Chrome extension.

- **Ethical Clearance Certificate Automation**
  Developed an automated system using Google Forms and Apps Script for generating and distributing ethical clearance certificates.

Languages

- English (Fluent)
- Yoruba (Conversational)
